Pavel Biarkovich

Backend Team Lead · Ruby on Rails · Kafka · High-Load iGaming Microservices

Poznań, Poland · berkovich.pasha@gmail.com · +48 571 920 420 · linkedin.com/in/pavel-berkovich

Backend Team Lead with 6+ years in Ruby on Rails. At SOFTSWISS (B2B iGaming platform) I lead a team of 15 and directly manage its 5 backend engineers; we own 9 event-driven microservices that serve 300+ online casino operators and consume 8.5k Kafka events/s. Before that, 4 years on the real-time player segmentation and marketing-automation engine.

EXPERIENCE

Backend Team Lead · SOFTSWISS — 2026 — Present

Player segmentation, bonus system, tournaments, jackpots, notifications + 4 more services

- Lead a cross-functional team of 15 owning 9 microservices; direct manager of 5 backend engineers: roadmap and sprint planning, system design reviews, releases, incidents, 1:1s, mentoring.
- Set up code ownership (CODEOWNERS, service-to-team map). Main developer of a code-review bot (GitLab + Slack) that assigns reviewers to merge requests, as review became the bottleneck: least-loaded choice, reminders, escalation, time-to-review reports; used by **8** teams, **47** reviewers. Set up AI code review in 5 repositories.
- Write interactive onboarding docs for the team's services (simulators, quizzes); with the team, keep automating routine work (Airflow pipelines, LLM release notes) and optimising slow code.

Senior Ruby on Rails Engineer · SOFTSWISS — Nov 2021 — 2026

Real-time player segmentation service and its marketing-automation engine (multi-tenant)

- Worked on the real-time marketing-automation engine from its first version in 2022: triggers (40+ types) → conditions (128 types) → bonus, tag or notification. **2k+** events/s; now **5k+** live workflows.
- Planned the design of per-bet triggers (e.g. bonus right after a big win) and coordinated the team: game-round stream matched against pre-compiled trigger matchers, LRU/TTL caches invalidated via Redis pub/sub, **~2.75 s** bet to action.
- Implemented scheduled waits in workflows: weekly-partitioned PostgreSQL next to MongoDB and Sidekiq bulk scheduling in 30-second buckets.
- Stopped recalculating inactive players (**−54%** recalculation time, **~300 GB** out of the hot path); fine-grained update events cut recalculations by a further **31%**.
- Helped split the multi-tenant service into 3 independent production stacks without service-wide downtime.
- Reworked how segmentation filters are built and moved 70+ out of the monolith: a new filter takes **6 h instead of 20 h** and one developer instead of two.

Ruby on Rails Developer · Aristek Systems — Jan 2021 — Nov 2021

STEMscopes by Accelerate Learning: US K-12 STEM platform for 6M+ students

- Worked on REST APIs during a monolith-to-services split (React frontend); covered legacy code with RSpec.

Junior Ruby on Rails Developer · iTechArt Group — May 2020 — Jan 2021

- Ruby on Rails program: built a news portal end to end (Rails 6, PostgreSQL, Sidekiq, RSpec/Capybara) with roles, editorial workflow, RSS, email digests.

SKILLS

Backend	Ruby, Ruby on Rails, Sidekiq, Karafka, Go, TypeScript
Brokers	Kafka, RabbitMQ
Databases	PostgreSQL, MongoDB, Redis, ClickHouse
Testing	RSpec, FactoryBot, Capybara
AI tooling	Claude Code, Cursor, CodeRabbit
DevOps	Docker, Kubernetes, Helm, GitLab CI/CD, Jenkins, Vault, Airflow
Monitoring	Datadog, Sentry, Prometheus, Grafana
Architecture	Event-driven microservices, system design, multi-tenant SaaS
Process	Agile, Scrum, Kanban

RECOGNITION

1st place	SOFTSWISS AI Hackathon 2026 · team Alpine Black Goose, AI-driven SDLC 2.0
1st place	SOFTSWISS Hackathon 2025 · PvP casino battles on WebRTC in 48 h
Speaker	“Hit the Target. Smarter Recalculations.” · SOFTSWISS internal conference, 2025

EDUCATION

Belarusian State University · Bachelor of Science in Applied Mathematics & Computer Science — 2016 — 2020

LANGUAGES

Russian Native | **English** Intermediate | **Polish** Intermediate (B1)
